

# MOSES Progress

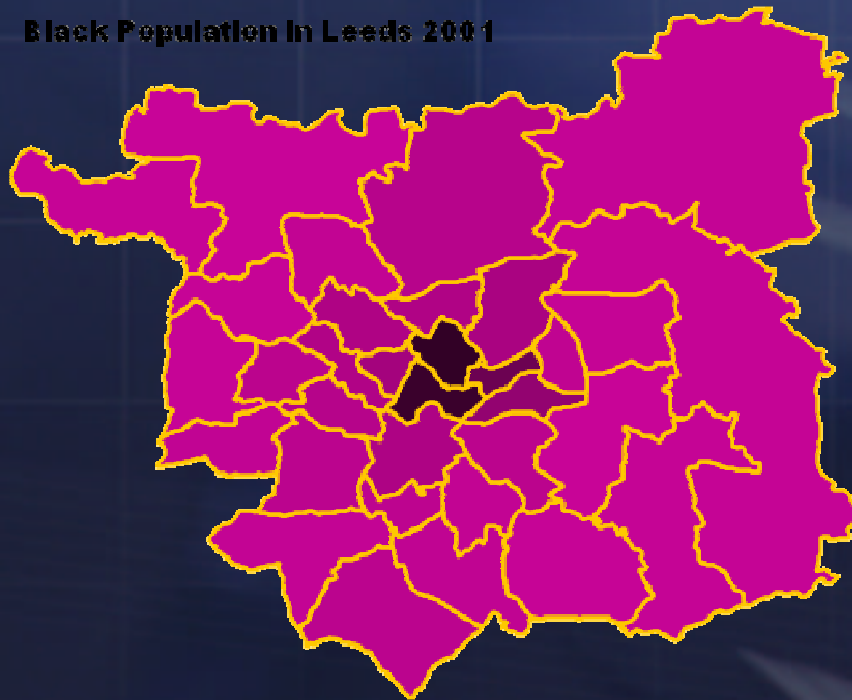

Paul Townend  
26<sup>th</sup> January 2007

# Portal improvements

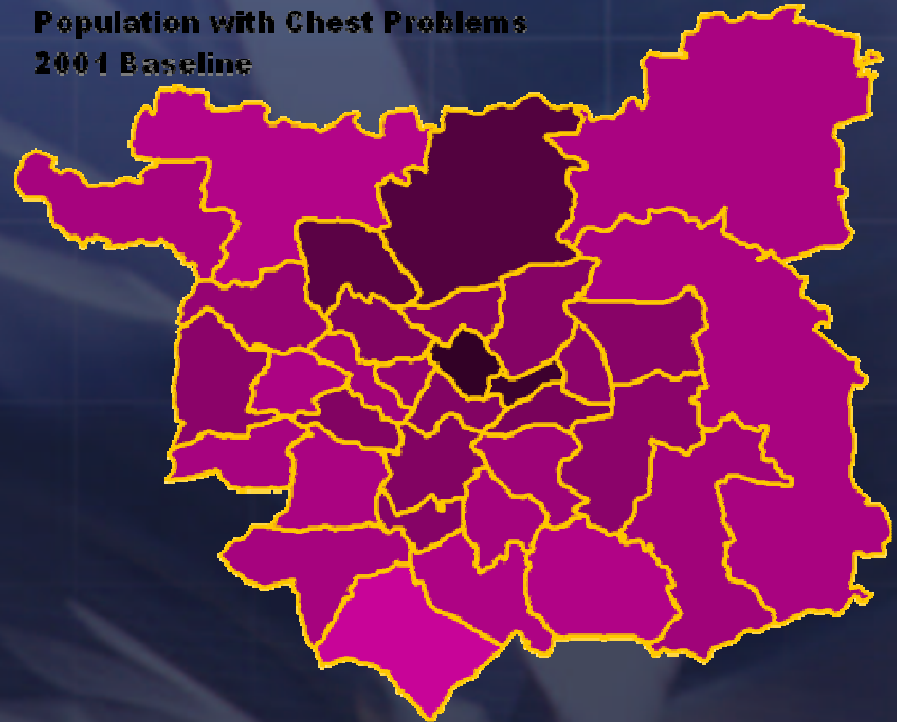

- 1 Data can now be sorted either via ward name or via data “value” (i.e. population, car ownership, etc.)
- 1 A raft of extra data has been added to the Mapping portlet...

# Screenshots of new mapping

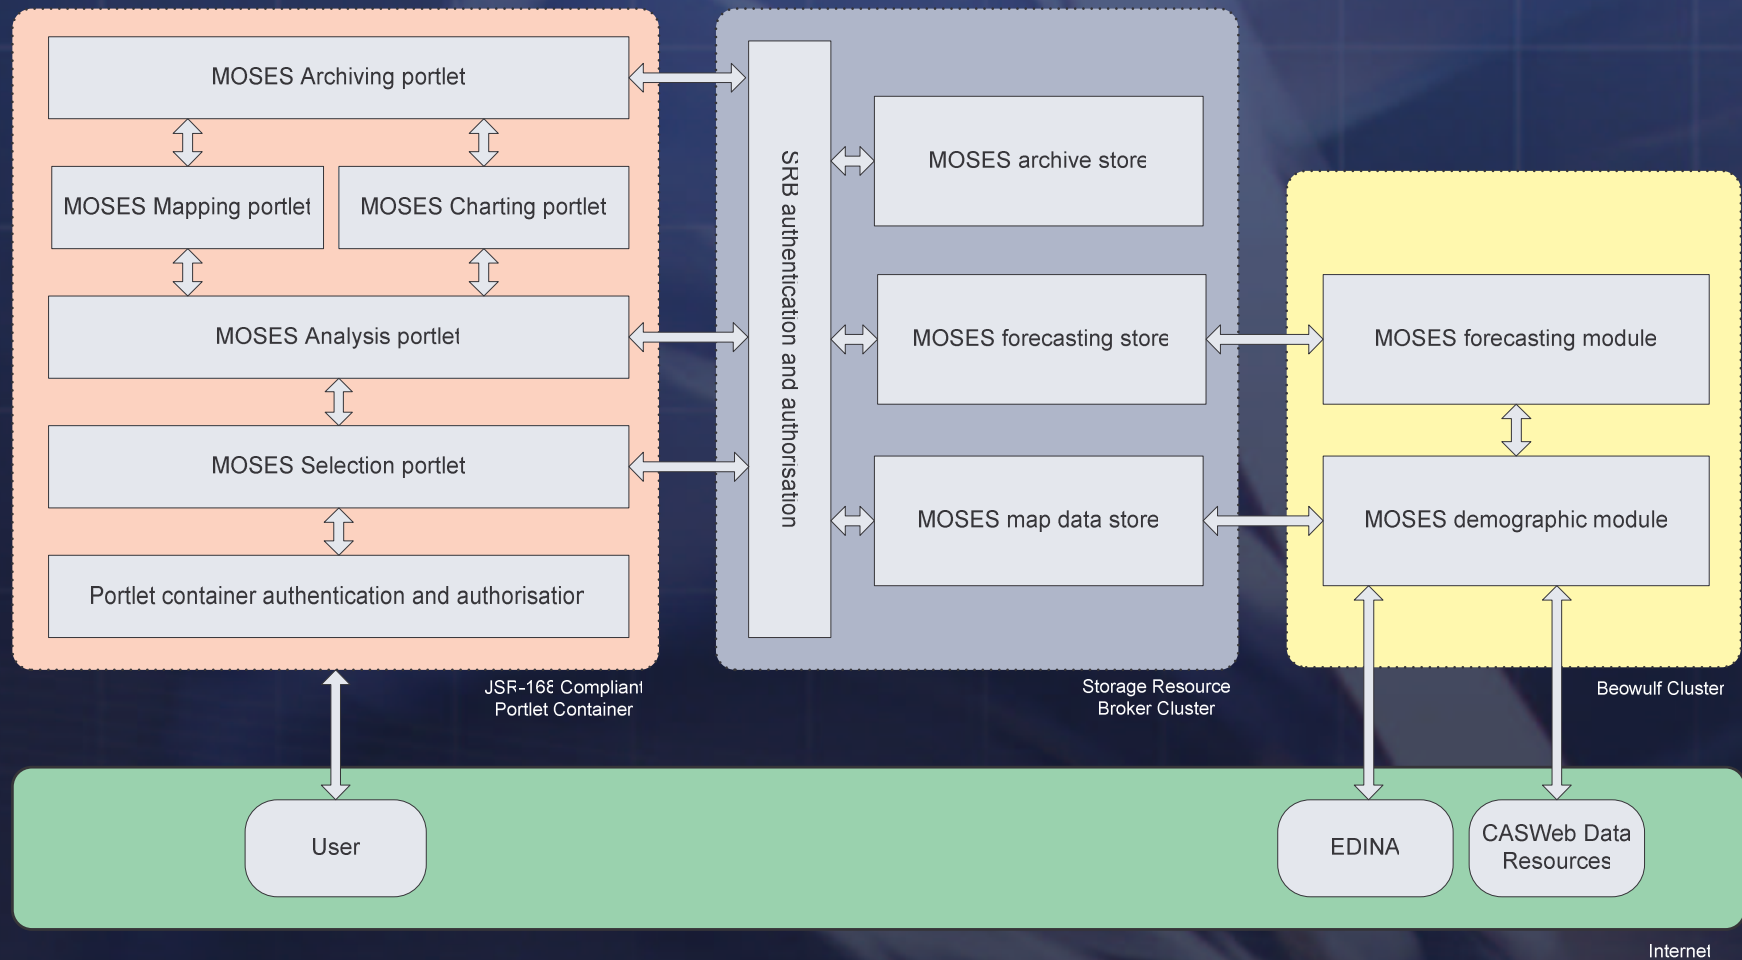

**Black Population In Leeds 2001**

**Population with Chest Problems  
2001 Baseline**

# Architecture WIP

# Next steps (I)

- 1 Analyse the IBHIS architecture and work out weaknesses and points that we can improve upon.
- 1 Really work hard on getting some good publications out. Consider IEEE magazine article as a priority.

# Next steps (II)

- 1 Once a standard data format is agreed (this is a priority, I feel), work can begin on a re-engineered MOSES engine.
- 1 Split presentation layer into two: portlet and application.

**FIN**
